

Adapter eMMC/JTAG dla Riff Box 2 - RC3000

Product ID: 22366

Price: **18.00 EUR**Product weight: **0.10 kg**

Description:

Adapter eMMC/JTAG dla Riff Box 2 - RC3000 is an additional adapter for Riff BOX that allows you to solve problems with ISP communication. From now on it is not necessary to desolder the resistor on the CLK bus. Of course, it also allows operation of phones with damaged JTAG points (access to ROM2 via EMMC) or write / read EMMC (applicable for data recovery using the new IDC30 pin connector). Thanks to it you can do EMMC format or low-format in case of EMMC damage, repartitions (Slave / Master) or EMMC cloning. It also allows connection in ISP mode (directly into the phone's board without removing the EMMC chip) and Direct (by removing the BGA chip and soldering to the appropriate memory fields or using an adapter). We connect via JTAG and IDC20 socket.
