Easy Jtag Z3X Plus Ultimate 16in1 (JTAG/eMMC/UFS)

Product ID: 22326

Price: **569.00 EUR**

Product weight: **1.50 kg**

Description:

Easy Jtag Z3X Plus Ultimate 16in1 (JTAG/eMMC/UFS) is a complete device for communication via JTAG, SD (read/write eMMC / eMCP) and MPHY protocol (read/write UFS). The Ultimate version consists of the Easy Z3x Plus interface with a set of 13in1 adapters for reading 99% of eMMC / eMCP systems together with 3in1 adapters for reading UFS (BGA 153, 95 and 254). The interface of the well-known Z3x group - of which Multi-COM is the official representative - not only serves to repair the bootloader but has a built-in PinFinder so that we can find the JTAG pinout in a few seconds. The box also supports the latest version of the full 4-bit ISP transmission and MPHY protocol (read / write UFS memory). In addition, the Box has a fully functional Fbus and SPI communication module, thanks to which it will be possible to flash a repaired phone without additional devices.
