

## Infrared Soldering Station Aoyue int720

Product ID: 16940

Price: **1199.00 EUR**Product weight: **30.00 kg**

### Description:

Infrared Soldering Station Aoyue int720 is an advanced rework station, infrared heater and soldering irons. It has an IR lamp mounted in an adjustable holder for easy operation. All operating parameters are set and read digitally. Applied technology eliminates the problem of shifting adjacent to the soldered components. The source of heat is here IR lamp, and a quartz heater. Closed loop temperature control ensures the safety of soldered components. Ideally suited to work with BGA, micro BGA, QFP, PLCC, SOIC and small SMD components. The use of the heater allows you to prevent deformation of the plate soldering. It has an IR radiation shield that protects the user's eyesight. Designed primarily for use with larger systems such as : chipsets, motherboards, chipsets, embedded processors in systems and others.
