

Qianli Super Cam X 3D Thermal Imager

Product ID: 22680

Price: **979.00 EUR**

Product weight: **4.50 kg**

Description:

Qianli Super Cam X 3D Thermal Imager is an infrared camera specifically designed to detect hot thermal spots on small circuit boards. The analyzed image is visible after connecting the camera to a computer via USB-C, and then installing dedicated software from the Qianli website. From the application level, you can perform many operations, incl. automatically adjusting the contrast, calculating temperature curves and exporting the material to JPG or MP4. The devices to be inspected can be placed on an antistatic heat resistant mat on the base. However, its camera can be detached and mounted on an ordinary tripod, which allows you to monitor devices without using a stand.
