

## Test JIG NKI 6100

---

Product ID: 981

Price: **52.91 EUR**

---

Product weight: **0.40 kg**

### Description:

Test JIG NKI 6100 is a device used to help diagnose problems in mobile phones. Its main purpose is to make the phone function normally outside of its case, so we can test & check all the voltages & test points. Without one, usually repairers have to guess what part is incorrect, as it is difficult to get access to the PCB with the battery connected & also the interface to the PC.
