The QIANLI LC-IR01 thermal imaging camera

Product ID: 22341

Price: **999.00 EUR**

Product weight: **4.00 kg**

Description:

The QIANLI LC-IR01 thermal imaging camera is a professional camera for detecting damage to components on a PCB. Allows for quick fault diagnosis on PCB laminates. It is a device that uses interlaced double spectral positioning technology. Thanks to the efficient software for intelligent image analysis on the PC side, the use of intelligent algorithms, the camera gives the operating temperature of any element of the motherboard live and indicates the temperature differences in its areas. Thanks to the comparative analysis of the motherboard before and after the repair, it can quickly and accurately identify problematic systems or areas, and thus significantly speed up the repair.
