

VR-TABLE for JTAG EMMC FBUS Tool

Product ID: 17327

Price: **899.00 EUR**

Product weight: **15.00 kg**

Description:

VR-TABLE for JTAG/EMMC/FBUS Tool is a precision tool for non-invasive ISP (ie, In System Programming) Reading and writing via EMMC, JTAG which replaces the need for soldering or desoldering anything in motherboard. VRTable enables forensic examiners to acquire data from Mobile Devices, GPS Devices and other electronics units. Optimization is based on a fully individually configurable VR-ARMS ended precision probes and additional reference voltages for all types of memory. VRTable can be also freely used in the car diagnostics (car radios, controllers) as well as in FBUS communication mode - completely replacing the RJ45/RJ48 cables.
